## EDUCATION

2020 to Present

**Integrated MTech. (5 Year) Mathematics And Computer Science** Vellore Institute of Technology  
CGPA 9.03/10.0

2019 to 2020

**Bachelor of Applied Science (Hons.) Mathematics And Computer Science** Institute For Excellence in Higher Education  
Percentage 93.1/100

2007 to 2019

**High School Diploma Physics, Chemistry, Mathematics And Informatics Practices** Sagar Public School  
CBSE XII 81 Percentage  
CBSE X 9.0/10.0 CGPA  
JEE Mains 97.467 Percentile  
JEE Advanced 23K Rank

## EXPERIENCE

2020 to Present

**Casual Academic**

Vellore Institute of Technology

- Interned as an GoLang Developer and UI/UX Designer at Economize.Cloud *January 2022 to April 2022*
- Core Committee Member Google Developer Student Clubs VIT from *December 2020 to September 2021*
- Research Committee Member (Machine Learning, Network Security) Association For Computing Machinery VIT from *December 2020 to September 2021*
- The Table below lists the courses I have Studied.

Course code	Course Name
CSI2003	Advanced Algorithms
CSI3020	Advanced Graph Algorithms
CSI3002	Applied Cryptography and Network Security
CSI3005	Advanced Data Visualization Techniques
CSI3025	Application Development and Deployment Architecture
CSE4031	Game Theory
CSI3003	Artificial Intelligence and Expert Systems
CSI3005	Advanced Data Visualization Techniques

## SKILLS

**Tools:** Linux, Git, Android studio, Make, CMake, Docker, Kubernetes

**Languages:** Python, R, Java, L<sup>A</sup>T<sub>E</sub>X, Shell, C, C++, Rust, GO, Clojure, Vue.js, WebAssembly, Yew

**Certification:** Listed Below

Building Distributed Applications In GO

Scala Type Classes And Parameterization

Concurrent Programming With GO

Advanced Linear Models for Data Science 2: Statistical Linear Models

Advanced Linear Models for Data Science 1: Least Squares

Advanced C Programming Integrating C and Assembly Language

Bayesian Methods for Machine Learning

Improving Deep Neural Networks: Hyperparameter Tuning, Regularization and Optimization

Image Understanding With TensorFlow on GCP

Sequence Models for Time Series and Natural Language Processing on Google Cloud

Recommendation Systems With TensorFlow on GCP

DeepLearning.AI TensorFlow Developer

Rust Fundamentals and Rust Essential Training

## PROJECTS

---

- CLI Todo - Experimental CLI Built With GoLang, Postgre and Redis, Redis is Used to Handle Inserts During High Load, And New Records are Inserted into PostgreSQL With a Small Delay Using Batch Insert Operations. The Todos Entered in the CLI are Stored in a Database (Postgres). The Data Fetched From the Database is Cached in Redis. *January 2022 to April 2022*
- Skin - Prevention of Session Hijacking using Session ID Reset Approach with the Implementation of Kerberos Algorithm Written in GoLang and Rust Separately. *June 2021 to July 2021.*
- Electric Funeral - A Combination of Software Defined Network (SDN) And A Multi-Layer Perceptron (MLP). Neural Network That Results In The Mitigation of DDoS Attacks. *May 2021 to September 2021*
- Xen - Personal/Portfolio, Website Built With Rust, Rocket, Docker, Javascript (Technically No-Javascript), Tailwind CSS And L<sup>A</sup>T<sub>E</sub>X. CMS for Serving My Website and Personal Blogs. *August 2021 to September 2021*
- Neural Network Art - A Neural Network That Generates Pieces of Art/Pictures Using Clojure. *August 2021 to September 2021*
- Evangelion - Decentralized Chat Application Built With Node.js, Aleph.im, Docker, Tailwind CSS, Yew (Rust Frontend Framework). *September 2021 to October 2021*
- Audio Arca - An Experimental Audio and Text Chat Client-Server Application Written in Golang For Arca/Evangelion As An Sub-Modularity-Function which Focuses on Library PortAudio(I/O)-Architecture Testing. *September 2021 to September 2021*
- Vostok - Vostok is a Rust-Based HTTP Transformation Layer To Seamlessly Convert REST Calls Into GraphQL Calls For Piecemeal API Migrations. *July 2021 to September 2021*
- Neo - Neo is a Single File Server. It Responds to Every GET Request it Receives with the Content of a Given File (Specified by ENV or CLI Argument), and for Every Other Request (with any other HTTP Method or Path) it returns a 404. Written in GoLang And Rust Separately. *September 2021 to September 2021*
- dbench - Benchmark Kubernetes Persistent Disk Volumes With FIO: Read/write IOPS, Bandwidth MB/s and Latency. Dockerized 'dbench' Image Inspired by leeliu/dbench. Improvements over other 'dbench' FIO - IOENGINE - Being Able to Set The 'ioengine' Can Prevent Weird Situations Where Direct Looks Faster than Buffered Writes. *September 2021 to September 2021*

## INTERESTS

---

- Japanese And Origami Crafting *July 2021 to Present*
